

Mr. Vikas Pathak Presentation.

Nichrome illustrated innovation & automation in modern retail bulk packaging. The highlighted vertical ffs machines integrated with baling machines which collate the packs into 30 KG Bags. These bags are very neatly formed & can be easily stacked & handled. A retail store will find these bags an easy tool for dispensing individual packs. The whole system into filling into sacks & stitching or filling into boxes & taping is eliminated. Nichrome also displayed a wide variety of shapes & sizes which can be formed on their VFFS machines. The growth in stand up pouched is 11.6% & today these pouches can be formed on the VFFS machine itself. to give high productivity compared to pick-fill-seal systems.
